

The Make ISV Playbook

How to enable your customers to build deeper
and wider API integrations more quickly

August, 2024

Make empowers everyone to innovate without limits

Make allows individuals and teams through an enterprise to visually design, build, and automate anything, from small tasks to complex workflows and systems, without the need for coding expertise. Connect apps to build powerful workflows in minutes and scale your business faster than ever.

- ✓ Design workflows and watch them run in real time
- ✓ Create and launch in minutes- not days.
- ✓ Choose from thousands of apps
- ✓ Unlimited use cases across all departments
- ✓ Enterprise-grade security

Unlimited possibilities for all industries and use cases

Make is a platform with unlimited possibilities. You can connect anything to build workflows, processes, and systems - which means that this platform can be used **across any role or industry**.

Delivering API Agility

Make users build deeper and wider API integrations, more quickly, with a lower risk of churn and with greater MRR

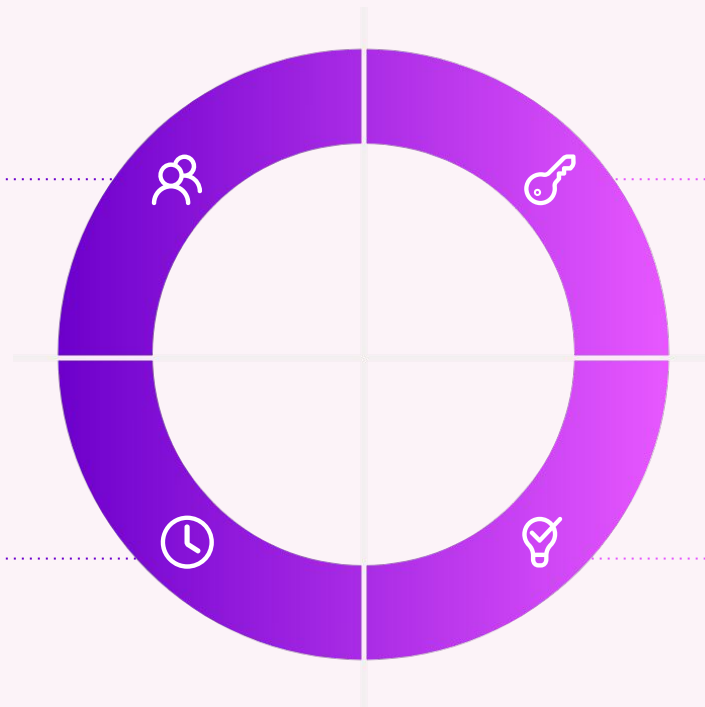

Delivering more customer value

Customers who use your APIs get more value from your solution. They're "stickier", with a lower risk of churn*. If you run a consumption-based pricing model, they will also generate more revenue.

*Freshworks calculated that their customers are 30% less likely to churn with one integration point (compared to 0) and 60-80% less likely to churn with five integration points or more.

Classic development is too slow and costly

Simply getting management approval for traditional development can take months. Skilled development teams are costly. By the time the project delivers, it could all be too late.

Speed is key

Your most valuable customers (those with hyper-growth) need to change their business process automations as they grow, maybe multiple times a year. They simply can't afford to go back to development teams each time.

The answer is Make

Make is a workflow automation platform that makes it easy for your customers to build and maintain automated business processes using your solution - without coding.

Testimonials

Aron Gosselin

Strategic Partnerships
Manager

Integrating Make with HubSpot has been a game-changer for our customers.

Combining Make's automation capabilities with HubSpot's CRM means customers can effortlessly automate complex workflows, tailor their marketing efforts, and elevate customer interactions, all without the need for complex coding.

Samuel Cook

Head of EMEA Partners

In the short time I've been at Airtable, it didn't take me long to realise a common thread amongst our top Services Partners in EMEA - they were building collaborative solutions with Airtable and Make to power incredible digital transformation and efficiencies for our joint customers.

These integration and automation possibilities are endless and we are just getting started!

Three steps to success with Make

Design your App

Take an MVP approach - build the App modules needed for your most common use-cases. Start with 5-6 modules and refine later

Build and Publish

Build in-house or outsource, then submit for review by Make. Your app is live!

Go-to Market

Join the Make Technology Partner Program to start co-marketing and co-selling motions

Build in-house or outsource?

Use your own skills

If you have available in-house resource that can be tasked to learn and build Make apps, there's no direct costs involved. You'll need to set aside around 4 developer-weeks in total.

Learning curve

Make has online training courses to help, taking around 2-3 days to cover all topics.

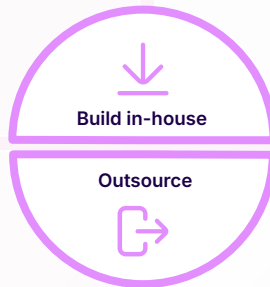

Leverage skilled partners

Make has Service Partners that are accredited, skilled, experienced in building Apps in *record* time.

Speed vs. Direct costs

Service Partners will be the quickest route to getting your App live. Each Service Partner sets their own rates - often at less than you might imagine.

Building and maintaining in-house

Custom Apps

About this course

- Free
- 37 lessons
- 4.5 hours of video content

Course curriculum

- Intro
- Creating Your First Module
- Integrating a Complete API
- Advanced App Development
- GraphQL APIs
- Common Mistakes
- Assessment

Join the Make Technology Partner Program

Once your App is live, take the next steps to success!

Partner Growth

- Make sandbox
- Promo codes
- Enablement for your Partner network

Development and Support

- App dashboard and performance review
- Developer support
- Contribute documentation

Co-market and co-sell with Make

- Plan co-marketing including blogs, technology spotlights, webinars
- Build attribution and referral mechanisms
- Enable alignment for direct sales

Thank you!
